DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a piezoelectric ignition device, classified in class 310, subclass 339.
- II. Claims 16-21, drawn to a lighter, classified in class 431, subclass 132.
- III. Claims 22-27, drawn to a lighter, classified in class 431, subclass 132.
- IV. Claim 28, drawn to a piezoelectric igniter, classified in class 310, subclass 339.

The inventions are distinct, each from the other because of the following reasons:

Inventions of

Group I and of Groups 2 and 3 are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because lighters can have flint igniters. The subcombination has separate utility such as sensor, signaling device, etc.

Inventions of Group I and of Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have

different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. Group IV has a biasing element associated with the plexor, which feature is not discussed in the Group I claims.

Inventions of Groups II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the devices have different modes of operation since the invention of Group II includes a push button and cam mechanism.

Inventions of Groups II and III and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the lighters can have flint igniters. The subcombination has separate utility such as a sensor or signaling device.
